

The concept of Broadband Transmission over power lines (BPL) is adverse to those goals which the FCC has strived to develop over the years. The interference that it will cause will, in my opinion, far outweigh any short term benefit.

Other services will experience a very serious negative impact, at the benefit of the interfering BPL, if BPL is permitted, even on an experimental basis.

I urge you to do the proper thing and do not allow BPL transmissions. Such a transmission method is only a shortcut and will have long lasting negative side effects.

Thank you for your consideration of my comments.
